

Genuine Parts & Maintenance
Units by Tetra Pak®

**Your key to efficient
maintenance and
production reliability.**

About

Our parts are designed and tested to ensure they deliver the best performance in the food manufacturing industry. We make sure you promptly get the parts you need to be able to maintain efficiency and safety in your operations – whenever and wherever you need them. With over 500,000 parts available, we always have what you need to keep your operation running at the best possible level of performance.

Benefits

- Secure reliable production with high-quality parts that can be delivered worldwide, through flexible delivery options that include planned road transport and expedited deliveries in case of emergency.
- Simplify ordering and management of parts by taking advantage of our assortment of over 500,000 components. All of them are available to order, covering all of your Tetra Pak processing and packaging equipment and more.
- Reduce machine maintenance downtime by an average of 60% when using Maintenance Units instead of single parts.

Global presence ensures availability

Present in all regions of the world, we are always available to support our customers. Our parts and Maintenance Units can also be delivered anywhere in the fastest way possible thanks to our world-class logistics network and partners.

Scheduled delivery

Due to increasing competition, there is more pressure on food and beverage manufacturers to reduce costs without compromising efficiency. With scheduled delivery of best-in-class genuine parts and Maintenance Units, Tetra Pak® Parts help you optimise your maintenance activities and improve reliability by reducing the risk of unplanned stops and stabilising your production.

Maintenance Units by Tetra Pak

Our Maintenance Units are an excellent way to improve maintenance procedures and increase machine uptime. Comprising of single parts that perform a function together, these plug-and-play units come pre-assembled, pre-set and pre-tested. As a total package, they are designed to increase maintenance efficiency, save you time and deliver long-term cost savings.

Case

Downtime decreased from 24.5 hours to 5.5 hours

An Asian dairy producer wanted to reduce downtime and associated costs by improving maintenance procedures. By conducting their filling-machine maintenance using Maintenance Units instead of single parts, filling-machine downtime decreased from 24.5 hours down to 5.5 hours, saving the customer 19 hours.

As a result of upgrading maintenance procedures, the customer increased filling-machine uptime and reduced operational costs.
